Professional Experience

Growth Strategy Research Analyst | EdVisingU | Toronto, ON

January 2026 – March 2026

- Collaborated with a multidisciplinary student team to research and evaluate growth opportunities for EdVisingU, an AI-driven educational guidance platform.
- Conducted market, policy, and competitive analysis on the Canadian postsecondary and EdTech sectors to identify scalable customer segments.
- Analyzed B2C (learners and families) and B2B (postsecondary institutions) markets using metrics such as market size, acquisition channels, and sales-cycle feasibility to inform strategic prioritization.
- Synthesized industry data and academic sources into evidence-based reports and presentations recommending EdVisingU's most viable growth path.

Cashier | Dollarama | Toronto, ON

June 2025 – November 2025

- Processed high-volume customer transactions accurately and efficiently while maintaining strong customer service in a fast-paced retail environment.
- Assisted customers with product inquiries, purchases, and issue resolution to ensure a smooth checkout experience.
- Collaborated with team members to manage peak store traffic, support store operations, and maintain store cleanliness and efficiency.

Education

York University | Toronto, ON

September 2024 – Present

- Lassonde School of Engineering, York University — B.Sc., Hons. Computer Science

Key Skills

- | | |
|--------------|--------------|
| • JavaScript | • TypeScript |
| • HTML, CSS | • React |
| • Node.js | • Vite |
| • Tailwind | • Vercel |
| • SQLite | • WebSockets |

Technical Projects

LiveBoard — Real-Time Collaborative Whiteboard

- Built a real-time collaborative whiteboard with WebSockets and Socket.IO; synchronized shape creation, updates, and deletions across multiple users with sub-100ms latency using board snapshot and incremental event diffing.
- Engineered a hybrid persistence layer with SQLite and in-memory caching, separating durable board state from ephemeral cursor/path events to minimize unnecessary DB writes and keep live collaboration performant at scale.

Geographical Midpoint Calculator

- Developed a geospatial web app that geocodes two addresses via the Nominatim API and computes a bias-adjustable geographic midpoint using great-circle interpolation, rendered on an interactive Leaflet map.
- Integrated the Overpass API to surface nearby points of interest around the computed midpoint, dynamically plotting categorized map markers for restaurants, cafes, parks, hospitals, and hotels.
