EDUCATION

York University

Bachelor of Science, Hons. Computer Science

Toronto, ON

Sep. 2024 – May 2028

EXPERIENCE

Software Engineer Intern

April 2026 – Present

Community of Guardians

Remote

- Built an **AI research engine MVP** that classifies papers by **UN SDGs** and generates summaries and lesson drafts, by developing a full-stack web app with document ingestion and **LLM-powered processing**
- Automated **research-to-content pipelines** for sustainability papers, producing **structured metadata, classifications**, and **plain-language outputs**, by implementing PDF/DOI/URL parsing and AI summarization workflows
- Engineered a **full-stack admin review system** for AI-generated outputs, supporting upload, processing, editing, and approval, by building frontend review tools and backend processing pipelines

Software Engineer Intern

February 2026 – May 2026

Souvenote

Remote

- Designed and built the **landing page from scratch** in React, applying a luxury aesthetic with custom animations and a premium gold, silver, and rose-gold visual identity
- Implemented **scroll-driven animations** and **responsive layouts** to match a high-end brand direction, replacing a static wireframe with production-ready React components
- Architected a **credit-based system** in PostgreSQL to gate AI image and song generation, tracking per-user balances with automatic provisioning on account creation

PROJECTS

Quizlio | React, TypeScript, Node.js, Express, SQLite, Zod, Tailwind CSS, Vite

April 2026

- Built a full-stack AI-assisted exam trainer for **EECS 2031**, adopted by **100+** students and generating **400+** page views, by creating a structured platform for importing, validating, storing, and taking exam-style multiple-choice quizzes.
- Increased quiz consistency and reduced malformed imports by implementing **client-side and server-side schema validation with Zod**, supporting multi-answer questions, per-option explanations, and syntax-highlighted code blocks for technical exam prep.

Real Estate Automation | n8n, Node.js, Express, React, SQLite, Gemini

April 2026

- Engineered a **full-stack real estate automation platform** integrating **Google Gemini 2.5 Flash** to generate AI-powered social media captions from property listings, dispatched via **n8n webhook orchestration** to Instagram and Discord
- Built a **layered REST API** in Node.js/Express with a **controller-service architecture**, backed by **SQLite**, featuring a structured n8n callback contract that updates post status and maintains a **full audit log**
- Deployed across **Heroku** (API) and **Vercel** (frontend) with a **React SPA**, custom data-fetching hook, and environment-driven configuration for CORS, database, and webhook routing

LiveBoard | Socket.IO, Konva, Zustand, SQLite, React, TypeScript

March 2026

- Built a **real-time collaborative whiteboard** with **WebSockets** and **Socket.IO**; synchronized shape creation, updates, and deletions across multiple users with **sub-100ms latency** using board snapshot and incremental event diffing
- Architected a **hybrid SQLite + in-memory persistence layer**, separating board state from transient cursor events to **reduce database writes** and sustain real-time collaboration at scale

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Java, C, Python, Assembly, SQL, HTML/CSS.

Frameworks: React, Express, Node.js, Tailwind CSS.

Developer Tools: Git, Docker, Linux, VS Code, Eclipse, Vite, Vercel, Railway, Figma, Heroku, Claude Code, Cursor.

Libraries: Socket.IO, Konva, Zustand, Leaflet, SQLite.
