EDUCATION

York University

Bachelor of Science, Hons. Computer Science

Toronto, ON

Sep. 2024 – May 2028

EXPERIENCE

Software Developer

Feb. 2026 – Present

Souvenote

Remote

- Designed and built the landing page from scratch in React, applying a luxury aesthetic with custom animations and a premium gold, silver, and rose-gold visual identity
- Implemented scroll-driven animations and responsive layouts to match a high-end brand direction, replacing a static wireframe with production-ready React components
- Architected a credit-based system in PostgreSQL to gate AI image and song generation, tracking per-user balances with automatic provisioning on account creation

Research Analyst

Jan. 2026 – March 2026

EdVisingU

Remote

- Researched growth opportunities for an AI-driven education platform, evaluating scalable customer segments with a multidisciplinary student team.
- Conducted market, policy, and competitive analysis across Canadian postsecondary and EdTech sectors to identify high-potential entry points.
- Synthesized B2B and B2C findings into evidence-based reports and presentations that informed EdVisingU's go-to-market strategy.

Retail Cashier

June 2025 – Nov. 2025

Dollarama

Toronto, ON

- Processed high-volume customer transactions accurately and efficiently while maintaining strong customer service in a fast-paced retail environment.
- Collaborated with team members to manage peak store traffic, support store operations, and maintain store cleanliness and efficiency

PROJECTS

Real Estate Automation | *n8n, Node.js, Express, React, SQLite, Gemini*

April 2026

- Engineered a full-stack real estate automation platform integrating Google Gemini 2.5 Flash to generate AI-powered social media captions from property listings, dispatched via n8n webhook orchestration to Instagram and Discord.
- Built a layered REST API in Node.js/Express with a controller-service architecture, backed by SQLite, featuring a structured n8n callback contract that updates post status and maintains a full audit log.
- Deployed across Heroku (API) and Vercel (frontend) with a React SPA, custom data-fetching hook, and environment-driven configuration for CORS, database, and webhook routing.

LiveBoard | *Socket.IO, Konva, Zustand, SQLite, React, TypeScript*

Feb. 2026

- Built a real-time collaborative whiteboard with WebSockets and Socket.IO; synchronized shape creation, updates, and deletions across multiple users with sub-100ms latency using board snapshot and incremental event diffing.
- Architected a hybrid SQLite + in-memory persistence layer, separating board state from transient cursor events to reduce database writes and sustain real-time collaboration at scale.

Geographical Midpoint Calculator | *React, Leaflet, OpenStreetMap API, Overpass API, Vite*

Jan. 2026

- Developed a geospatial web app that geocodes two addresses via the Nominatim API and computes a bias-adjustable geographic midpoint using great-circle interpolation, rendered on an interactive Leaflet map.
- Integrated the Overpass API to surface nearby points of interest around the computed midpoint, dynamically plotting categorized map markers for restaurants, cafes, parks, hospitals, and hotels.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Java, C, Python, SQL, HTML/CSS.

Frameworks: React, Express, Node.js, Tailwind CSS.

Developer Tools: Git, Docker, VS Code, Eclipse, Vite, Vercel, Railway, Figma, Heroku.

Libraries: Socket.IO, Konva, Zustand, Leaflet, SQLite.
